

Individual Home Installation

How it works: The SolarSheat 1500 panel heats fresh, outside air. The amount of heat produced is based on the volume of air passing through the solar panels and the degree of sunshine. Fresh air is preheated from the sun and forced into the room. The SolarSheat is a supplemental heating system. It does not work at night. No AC electricity is required.

Direct Venting into a Room - SolarSheat 1500.
