

For Immediate Release

**Vaughan, Ontario - For Immediate Release – September 13, 2005**

**Your Solar Home Inc. introduces glazed SolarSheat solar air heating system for space heating.**

**Toronto, ON September 13, 2005: Your Solar Home Inc.**, today introduced a glazed version of its popular SolarSheat air heating system. The product is branded the SolarSheat 1500g.

The SolarSheat 1500g is designed for space heating applications. The SolarSheat 1500g is standalone solar air heating system. It works differently than its companion product the SolarSheat 1500, by drawing air from inside the room through the panel. Instead of fresh air being delivered air is continually drawn from the room and returned back to the building at a higher temperature. This makes the SolarSheat 1500g ideal for space heating applications with very cold climates or where fresh air is not important.

The glazed SolarSheat 1500g can provide enough heat for up to 1000 sq ft. The unit comes with a separate thermostatic control to regular the temperature. The unit is completely self contained and needs no external power source. A photo voltaic panel provides the energy to power the fan inside the unit. The SolarSheat 1500g comes with a patent pending mounting strip, accessory and duct kit that makes installation easy for do-it-yourselfers, installers and contractors. The panels can be mounted on a wall or roof.

The SolarSheat 1500g is the perfect solution for the high cost of energy for the upcoming winter heating season. The Department of Energy announced that in some states the cost of natural gas could see an increase up to 71% for this winter heating season. One SolarSheat 1500g can help consumers lower their utility bills and provide a clean source of power.

“The timing is perfect for the entrance of this product in the market as heating fuel prices have reached record levels and are expected to rise drastically this winter. Consumers are getting hammered by these high fuel prices and have very few options at their disposal. By installing these solar air heating systems in conjunction with existing traditional heating systems, we expect users to achieve up to a 25-35% gain in fuel efficiency. Meaning that by using the solar air heating system, they will use 20-35% less fuel, says Todd Kirkpatrick, company President.

Unlike any other heating systems, solar air heating systems can pay for themselves within three to six years in the traditional heating fuel they offset.

Your Solar Home Inc. is a Canadian company located in Vaughan Ontario and manufactures solar hybrid heating and ventilation systems for residential and industrial use. The SolarSheat product line is available from Your Solar Homes authorized partners throughout Canada and the United States.
