CANADIAN-MADE SOLARSHEAT PROVIDES INNOVATIVE HEATING SOLUTION FOR NEW ENVIRO HOME

~Developer Cites Efficiency and Ease of Installation for Using this Technology~

Toronto, ON – A developer building an Enviro Home™ – which promises to be one of the country's most energy efficient homes -- has chosen Canadian-made SolarSheat technology as an innovative heat source.

Manufactured by Vaughan-based Your Solar Home, the SolarSheat is a modular, panel-like system that heats trapped air using the sun's rays and then transfers this air into the home – while cooled air from inside is drawn back through the system for reheating.

Aside from the extremely low cost of energy the system provides, the SolarSheat was chosen for its affordability (prices start at \$1,999 CDN) and ease of installation according to Ben Klundert, president and spokesperson for BK Cornerstone Design/Build Ltd. – the Windsor-based company building the Enviro Home.

“I really like this product from a construction standpoint, because it is fairly easy to install... a lot less complicated than conventional solar cell technology, where you're getting into converters, inverters and battery technology. If you're a developer looking at installing an alternative energy solution in several homes, this is quite appealing because you can install a number of these units in a short period of time and at a fairly low cost of installation,” says Klundert.

Klundert predicts consumers will quickly see the value of the SolarSheat because “it doesn't cost a lot more than a window – and yet it provides reliable source of heat for many years.”

Each of the two SolarSheats being used for the Enviro Home, can heat a room of up to 1,000 sq. feet. The system has a 7-8 year payback period, lowering energy consumption by 20-35%, with each SolarSheat reducing CO2 emissions by .35 tonne annually.

Todd Kirkpatrick, president of Your Solar Home, says he's excited that a major developer has embraced the SolarSheat as a viable secondary source of heat. "Developers such as BK Cornerstone are beginning to realize that with the SolarSheat, you have an added selling feature for consumers who want to keep energy costs down," says Kirkpatrick. "Most home owners today are looking beyond the cost to purchase a home – they want to know what it costs to heat the home as well – because it can have a dramatic impact on cashflow and overall cost of living."

ABOUT BK CORNERSTONE

BK Cornerstone is a Windsor-based developer and builder of quality homes. The company is currently building the Enviro Home – a highly insulated home that deploys alternative heating solutions in order to dramatically reduce energy costs. Scheduled for completion in early fall of 2006, the Enviro Home will serve as the model and inspiration for more than 800 homes across three different subdivisions in the Windsor area.

ABOUT YOUR SOLAR HOME

Your Solar Home Inc. is a Toronto based company that manufactures solar air, ventilation and furnace heating systems for residential and industrial use. The SolarSheat product line is available from Your Solar Home's authorized partners in Canada and the U.S. For more information, call (905) 669-2212, email info@yoursolarhome.com or go to www.yoursolarhome.com.
